PRECISION IN TARGETING

Targeted treatments require precision to avoid affecting surrounding healthy tissue. Cartridges with adjustable penetration depth settings can help practitioners tailor the treatment to the specific area they want to address.

100% COVERAGE WITH LINE MODE

Line mode offers uniform, faster treatments for larger areas and may be less uncomfortable, while dot mode allows for precise, customizable treatments with less risk of overheating.

* One-touch switch between modes

EXTREMELY FAST TREATMENT

Standard 300 shots treatment for facial skin, depending on parameters settings, starting from

3 MINUTES

Treating the face for **facial skin tightening** and lifting, a basic MFU treatment might involve around **300 to 400** individual **ultrasound shots**. On the other hand, when treating larger areas or areas with more significant laxity, such as the neck or décolletage, the number of shots may increase to **500 or more**.

Lift-!N
Hybrid

SAFETY

CONTACT SENSOR

The cartridge will stop operating when it is not contacted with the skin

MOVEMENT SENSOR

The movement sensor prevents consecutive shots in one place
